Acestream android tv

FOLLOW US Ace Stream Media is an open source multimedia program with feature rich player (based on LibVLC), providing the following features:- Playback of any video and audio files including MKV, MP4, AVI, MOV, Ogg, FLAC, TS, M2TS, WV and AAC, as well as playback network streams that are streamed through protocols HTTP (S), RTMP, FTP, BitTorrent, Ace Stream, etc. All coding is included, no need for individual downloads.- The program includes an audio and video media library and allows you to browse folders directly.- There is support for multi-channel audio, subtitles, teletext, and closed captions.- There is support for automatic rotation, video adjustment, and gestures for volume, brightness, and search control.- The ability to play content on remote devices and TV, through communication protocols Ace, Cast AirPlay, Google Cast, etc. Note: In this release, the default output format is set to automatic in settings, which means that the stream is transcoded when playing video in an MKV container with AC3 codec on devices and playing without supporting this audio codec (Apple TV, Chromecast, etc.). This leads to significant delays in starting recovery and increases the response to search (especially in low-powered devices). Therefore, if your remote device or player supports ac3 audio codec, you can go to settings and switch the output format to something more convenient. Important! To maximize the comfort and stability of streaming by playing content from P2P networks (BitTorrent /Ace Stream) on a remote device, use an Ace Cast connection. To use Ace Cast, it is necessary that the Ace Stream application be installed on the device from which the broadcast will be broadcast, as well as on the device where the broadcast will be played. Ace Stream Media is a common program that includes the following products:- Ace Stream Engine (Server) is a versatile multimedia flow manager that uses the most advanced P2P technologies for efficient data storage and transmission (MIT License, - Ace Media Library - improved modification of the most popular cross-platform multimedia player VLC media player, with support for P2P protocols and additional features. Distributed as open source (GPLv3 or later version, - Ace Stream TV service - module android TV, view broadcasts system Live Channels program (module Android TV Input Framework, Attention! Ace Stream Media does not contain any video and audio content, including links to such content, and does not allow the creation and publication of content that is visible or accessible to other users of the app. This program is intended solely to organize and/or play the user's personal content (which belongs to him or is at his disposal), as well as to play other legal content, including which is freely available on the Internet, independently adding such content (video, audio, photos, texts or any other material) to the program. Discover a new high-quality multimedia space on the Internet with Ace Stream Media.Ace Stream Media is a multifunctional multimedia application with the following features:- Fully featured multimedia player and media server, with support for P2P data storage and transfer protocols, convenient content catalog and the ability to use local and external databases, with presets and plugins, user settings and recommendations, with filters and equalizer, and many other features - the recovery of any video and audio files, including MKV, MP4, AVI, MOV, Ogg, FLAC, TS, M2TS, Wv and AAC, as well as network streams streamed via Ace Stream, BitTorrent, HTTP (S) protocol, RTMP, FTP, etc.. Includes all codecs without the need for separate downloads. Subtitles, teletext and closed-circuits are supported.- Watch on the Internet a wide range of broadcasts (TV channels, sports and cybersport broadcasts, user-generated channels, films, cartoons, etc.) that are broadcast on P2P networks, with a level of audio and video quality and traffic stability, in many ways surpassing all existing web broadcasts, which are broadcast using standard technology (unicast).- Play torrents online with one click without waiting for content download- Listen to high-quality radio and music on the Internet, loss-making formats- View content on remote devices (Apple TV, Chromecast, etc.) through communication protocols such as AirPlay, Google Cast and othersNote: In this release, the default output format in settings is set to automatic, which means that the stream is transcoded when playing video in an MKV container with AC3 codec on devices and players without this audio codec support (Apple TV , Chromecast, etc.). This leads to significant delays in starting recovery and increases the response to search (especially in low-powered devices). Therefore, if your remote device or player supports ac3 audio codec, you can go to settings and switch the output format to something more convenient. Important! To maximize the comfort and stability of streaming by playing content from P2P networks (BitTorrent /Ace Stream) on a remote device, use an Ace Cast connection. To use Ace Cast, it is necessary that the Ace Stream application be installed on the device from which the broadcast will be broadcast, as well as on the device where the broadcast will be played.
